

Since 1988, **OptiTex** has been the leading developer of 2D & 3D solutions for textile, industrial fabrics, apparel, upholstery, transportation, composites, homes furnishings and other sewn products.

OptiTex is making its mark on the global textile industry by providing digital software solutions for state-of-the-art pattern design, runway simulation and process optimization.

OptiTex products are sold and supported around the world through certified distributors and OEMs. OptiTex's Fashion Design Software solutions are available in 20 languages.

OptiTex recently developed its 3D Runway Suite of Tools; its technology produces 3D real-to-life fabric simulation out of 2D Patterns.

The 3D Runway Suite of Tools technology leverages the quality and productivity of virtual-reality cloth technologies from the gaming and movie industry. 3D Runway simulation has a real-to-life motion engine, which allows visualization of the garments' draping, according to the movement of a 3D model.

The 3D Runway Simulation takes into account all basic physical characteristics of the material: weight, bending, sheering, friction; it is easy to use, accurate and fast.

OptiTex LTD has more than 30,000 installations worldwide, including ABS by Allen Schwartz, Audi, BMW, Porsche, Toyota, Audi, Johnson Controls, Prevent, Walmart and many more.

We are proud to include: New Balance, ATSI, Best Manufacturing, Cherokee Uniforms, Coach Leather, Oxford Industries - Li & Fung, US Army, US Navy, Target Corporation, The Marena Group and many more among our list of satisfied 3D Runway customers.
